

A1 SW B1  
1. (Amended) A foam having a density ranging from about 10 to about 160 kg/m<sup>3</sup> and produced from a physical blowing agent, comprising a blend of a low density polyethylene and an ethylene polymer having a density ranging from greater than 0.94 to about 0.97 grams/cubic centimeter and a melt flow index of greater than 10 g/10 minutes, said ethylene polymer comprising at least one member selected from ethylene/alpha-olefin copolymer, ethylene homopolymer, and blends thereof.

A2 SW B2  
8. (Amended) A method of making a foam, comprising:  
a. blending a low density polyethylene and an ethylene polymer having a density ranging from greater than 0.94 to about 0.97 grams/cubic centimeter and a melt flow index of greater than 10 g/10 minutes, said ethylene polymer comprising at least one member selected from ethylene/alpha-olefin copolymer, ethylene homopolymer, and blends thereof;  
b. adding a physical blowing agent to said blend; and  
c. causing said blowing agent to expand within said blend, thereby forming a foam, whereby, said foam has a density ranging from about 10 to about 160 kg/m<sup>3</sup>.
